

CIO Solutions takes over the distribution of the business cloud solution Secure Data Space of SSP Europe GmbH in Turkey

CIO Solutions GmbH has expanded its IT Security business by the Secure Enterprise File Sync and Share solution (EFSS) Secure DataSpace by the manufacturer for cloud and IT security services SSP Europe. As a preferred partner for DACH and distributor for Turkey, CIO Solutions will offer SSP Europe solutions nationally and internationally.

Networked companies must be able to share their data with their partners always. The associated risk of misuse forces them, however, to provide their employees with secure solutions that meet the given safety guidelines. The company's employees use private cloud storage accounts every day, which have been considered unsafe since the scandals and revelations of Edward Snowden and can be a goal of data pioneering. This is exactly where SSP Europe GmbH uses Secure Data Space, which can be used as a cloud service or a virtual appliance from its own data center.

"The decision for this solution and the partnership with SSP Europe GmbH was not difficult for us since, as an alternative to private cloud storage solutions, the Secure Data Space business solution with the unique Triple-Crypt™ technology provides the company with maximum security. This type of encryption is recommended by Edward Snowden and is known as zero knowledge technology", said Cem Tutay, International PreSales Manager of CIO Solutions.

"With its cloud solution, SSP Europe is already very successful in the corporate market. We are very pleased to be able to enter the Turkish market with CIO Solutions. The Turkish market is growing rapidly, and Enterprise File Sync and Share solutions are urgently needed for cross-company and cross-countrie work", adds Thomas Haberl, Partner & Business Development at SSP Europe.

The Secure Data Space is now equipped with the Turkish language pack by the cooperation and offers the highly secure Triple-Crypt™ technology, which encrypts sensitive data directly on the user's device, during the data transmission as well as in the cloud memory itself. Despite the high level of security, the solution remains very user-friendly because you can precisely control the accesses with a practical team function and the multi-level rights and user concept. This high functionality, combined with ease of use, makes the daily work easier for the users and increases the satisfaction of the entire company. The Secure Data Space can also be adapted to the respective company design by the branding capability.

About SSP Europe:

SSP Europe GmbH, headquartered in Munich, develops innovative cloud and IT security services as a market leader in the field of secure service provisioning. SSP Europe offers a modular, scalable product portfolio that is suitable for use from small businesses to large international corporations.

The product portfolio of SSP Europe GmbH includes IT security services and solutions for firewall and intrusion prevention systems, spam and virus protection, remote access, IT

services and solutions such as Hosted Exchange, online backup, and Secure Data Space
Leading to leadership, housing and hosting.

SSP stands for SECURE SERVICE PROVIDING and thus for data center-centric IT and IT
security services.
