

## **CIO Solutions takes over the distribution of the business cloud solution Secure Data Space of SSP Europe GmbH in Turkey**

Istanbul, Feb. 10, 2015 - CIO Solutions GmbH has expanded its IT Security business with the secure Enterprise File Sync and Share solution (EFSS) Secure Data Space by SSP Europe, a manufacturer of cloud and IT security services. As a preferred partner for DACH and distributor for Turkey, CIO Solutions will offer SSP Europe's solutions nationally and internationally.

Networked companies must be able to share their data with partners always. The associated risk of misuse forces them, however, to provide their employees with secure solutions that meet the given safety guidelines. The company's employees use private cloud storage accounts every day, which are considered unsafe since the scandals and revelations of Edward Snowden and can be a goal of data espionage. This is exactly where SSP Europe GmbH with its Secure Data Space picks up this topic, which can be used as a cloud service or a virtual appliance from one's own data center.

"The decision for this solution and the partnership with SSP Europe GmbH was not difficult for us since, since as an alternative to private cloud storage solutions, the Secure Data Space business solution with its unique Triple-Crypt™ technology provides the companies with a maximum of security. This type of encryption is recommended by Edward Snowden and is known as zero knowledge technology", says Cem Tutay, International PreSales Manager of CIO Solutions.

"With its cloud solution, SSP Europe is already very successful in the corporate market. We are very pleased to be able to enter the Turkish market with CIO Solutions. The Turkish market is growing rapidly, and Enterprise File Sync and Share solutions are urgently needed for cross-company and cross-country work", adds Thomas Haberl, Partner & Business Development at SSP Europe.

Through this cooperation, the Secure Data Space is now equipped with the Turkish language pack and offers the highly secure Triple-Crypt™ technology, which encrypts sensitive data directly on the user's device, during the data transmission and in the cloud storage itself. Despite the high level of security, the solution remains very user-friendly allowing one to precisely control access with a practical team function and multi-level right- and user-management concept. This high functionality, combined with ease of use, makes the daily work easier for users and increases the satisfaction of the entire company. The Secure Data Space can also be adapted to the respective company design through its branding capability.

### **About SSP Europe:**

SSP Europe GmbH, headquartered in Munich, develops innovative cloud and IT security services as market leader in the field of secure service provisioning. SSP Europe offers a modular, scalable product portfolio that is suitable for use for anyone from small businesses to large international corporations.
