

SSP Europe launches new version of „Secure Data Space“

SSP Europe, the German manufacturer of cloud and security services and the DACH market leader in high-security cloud storage solutions, is launching the new version of its enterprise file sync and share solution (EFSS) "Secure Data Space", which is already used by over 250,000 business users.

The SDS fulfills the highest security standards with its zero-knowledge technology and central user and computer management (end-to-end encryption for client, transmission and server, data centers in Germany). The intuitive user interface provides users drag-and-drop features, drive letter (= Windows client) and an Outlook Add-In.

The highly scalable business solution is brandingable, supports mobile devices (iOS, Android, Windows Phone) and can be integrated into all existing software applications by means of an AD connection and programming interface (REST.API). The "Secure Data Space" can be obtained as a cloud service as well as a software for local installation on Windows / Linux servers.
