

M-net: Secure cloud storage for businesses

With "Data Space", M-net introduced a new cloud storage for its business customers, who can use it to store, synchronize, distribute and manage files.

"Data-Space" was developed by M-net in cooperation with SSP Europe and runs in an ISO-certified data center in Bavaria. It offers end-to-end encryption and, according to the Munich provider, a user and computer management designed for enterprise needs. Data can be accessed via PC, notebook, tablet and smartphone, as storage can be used via the browser and integrated into Outlook, as well as integrated on the computer as a virtual drive. There are apps for Android and iOS, too.

Five storage plans are available: "M-net Data-Space S" is the smallest and offers five GB of storage for five users for five euros per month. It can be tested for two months free of charge. The largest package »M-net Data-Space XL« brings it to 150 GB and 50 users. The monthly fee stacks up to 50 euros. A prerequisite for the use of the data space is a business customer connection from M-net.
