

Rausch Netzwerktechnik, e-shelter and SSP Europe cooperate

File exchange solution for OEM partners

Rausch Netzwerktechnik, e-shelter and SSP Europe are looking for OEM partners: With a cloud-based solution for data exchange for companies, short product launch times and marginal returns of over 55 percent.

Thanks to the now combined solution, OEM partners are supposed to provide their customers a cloud-based alternative to FTP, SharePoint or e-mail. The three cooperating suppliers promise a very short launch time as well as marginal returns of over 55 percent.

The SSP Europe data exchange solution, Secure Data Space, is part of the offer. The business software has "triple crypt technology" including client-side encryption, consistent branding capability and a company-specific rights concept.

Rausch Netzwerktechnik add the necessary hardware; the data center provider e-shelter, which is part of NTT Communications, takes care of the hosting.

Dr. Dieter Steiner, CEO of SSP Europe GmbH, comments: "We are looking forward to work with Rausch Netzwerktechnik and e-shelter. Both companies enjoy an excellent reputation and are considered experts in their fields. [...] The Secure Data Space is a highly functional software for secure file exchange from the cloud. Bundled with the powerful hardware from Rausch Netzwerktechnik and the hosting at e-shelter, OEM partners profit from the experience and expertise as well as from a very short Time-2-Market and outstanding marginal returns. "

Further information about the Secure Data Space is available directly from the provider.
