

# ITEBO corporate group cooperating with highly secure Enterprise File Sharing provider DRACoon

newdata@web.de

Regensburg (ots) – The ITEBO corporate group is expanding its portfolio in the area of IT security with the secure Enterprise File Sharing solution (EFSS) DRACoon. By doing so, it is backing the pioneering enterprise solution of a market leader.

Nowadays, the availability of data plays an increasingly large role for administrations and their employees. Interconnected administrations must be able to share their data with all their locations from everywhere and at any time. When doing so, safety requirements are high if data abuse is to be avoided. If the methods of making data available are not clearly specified or unambiguously regulated, data espionage poses a threat every time data is shared.

And this is exactly where DRACoon comes in with its security solution, which from now on can be used as ITEBO SDS from the ITEBO data center. Thanks to the integrated TripleCrypt® Technology, the data can already be encrypted on the client – in addition to the transmission path and on the server with secure and open encryption standards. This forms the basis for the Europe-wide GDPR certification EuroPriSe and the possibility to use and integrate the solution in all sectors in a flexible and legally compliant manner.

Since the beginning of October, the ITEBO Group has also been cooperating with the German-speaking market leader. The ITEBO corporate group primarily looks after local administrations and churches, charitable institutions and SMEs. With this cooperation, two strong partners who want to support and develop this market together have found each other.

“After an intensive research on the market, we decided in favor of DRACoon”, explains Dirk Stratmann, authorized representative in the sales division of the ITEBO Group. “The outstanding features of DRACoon and the fact that it is a German, certified manufacturer, have absolutely convinced us and inspired us”, Stratmann continues. “Especially with regard to the forthcoming EU Data Protection Regulation (GDPR), which will come into force in May 2018, we are relying on a solution that can cover everything in a future-proof and fully-fledged way. We are looking forward to working together”, he adds.

DRACoon offers the highly secure TripleCrypt® technology, with which sensitive data can be encrypted and decrypted directly on the user's end device using modern and open cryptography techniques. Despite the high level of security, the solution remains very user-friendly, since the access can be precisely regulated with a practical team feature and the fine-grained rights and users concept. It is precisely this high functionality, combined with

simple operation, that makes the daily work easier for users and, as a result, increases satisfaction.

“DRACOON is already very successfully represented in the corporate market with its SaaS solution. We are very pleased that we can offer our highly secure DRACOON solution to another large service provider with the ITEBO corporate group”, said Thomas Haberl, Partner & Business Development at DRACOON. Due to the branding ability, DRACOON can also be adapted very individually to the respective design of the customer.
