## Simplified Authorization Management: DRACCOON cooperating with Nexis

**Regensburg, April 13, 2018** – DRACCOON, an expert in enterprise file sharing and market leader in German-speaking countries, is cooperating with Nexis, the pioneer and leading provider of innovative authorization analysis and role modeling software.

Nexis Controle is the advanced solution for enterprise-wide identity data analysis, role modeling, and holistic risk management in entitlement management. Intelligent algorithms automatically detect risky authorization assignments of employees and visualize the data so skillfully that even experts with no technical background understand it. The Nexis Controle software thus becomes a collaboration platform for IT analysts, IT administrators and specialist departments. In addition, Nexis Controle is compatible with all identity management systems, applications, directory services and databases.

By combining both systems, DRACCOON provides its users with an optimal overview of all user structures. Intelligent cleansing workflows ensure that false and unnecessary permissions can be automatically removed. On the basis of own rules, policies and uses of standard risk indicators can be created to identify risks. In addition, the system provides comprehensive reporting with periodic, interactive reports on risks, roles, recertifications, and subject matter feedback. Nexis Controle is browser-based and can be easily integrated into the IT landscape. It can be operated simply by connecting to an identity management system, as a standalone solution in the enterprise or from the cloud.

Available as a cloud, hybrid or on-premises solution, DRACCOON provides all the components required for secure data exchange. With client-side encryption, customers benefit from the highest encryption standards plus zero knowledge. This means that except for authorized users, no one has access to corporate data, not even the provider itself. DRACCOON is a professional solution from ULD, the Independent Privacy Center, and certified as GDPR-ready by EuroPriSe as the first German software producer. Since the used data storage is hosted in Germany, the file-sharing solution is subject to the strict German data protection laws and offers maximum data security for companies of all sizes and industries.

Marc Schieder, CIO of DRACCOON, is pleased about the cooperation: “In addition to the technical benefits, the common location also connects us, because Nexis, like us, is based in Regensburg. In cooperating, we supply concentrated IT-power paired with a deep, mutually certified customer benefit ‘made in Germany’ directly from the Upper Palatinate to the world “, Schieder underlines with a smile.

# DRACoon

Dr. Ludwig Fuchs, CEO of Nexis, describes the added value of the cooperation for the customers: “With the help of our innovative technologies, we will be able to work with DRACoon in the future to make a key contribution to increasing and understanding IT security in the specialist areas. It will be even easier and more intuitive for DRACoon users to stay in control of their data. DRACoon and Nexis Controle perfectly complement each other in their philosophy of maximizing customer value and improving enterprise security.”
