Press Report

DRACCOON and Consol enable fully automated testing of integration and interface

Regensburg, June 03, 2018 – DRACCOON, an expert in enterprise file sharing and market leader in German-speaking countries, is cooperating with ConSol, a specialist for consulting, development, integration and operation of complex IT systems.

As digitalization progresses, linking various systems is becoming increasingly essential. A topic with which the Regensburg software manufacturer DRACCOON deals intensively time and again, especially when planning projects with new customers. With its universal API, the enterprise file sharing solution DRACCOON offers a wide range of applications from data exchange and workflow integration to secure e-mail communication and the complete modernization of file services. Thanks to client-side encryption, DRACCOON customers benefit from the highest encryption standard. This means that no one but authorized users have access to the company data – not even the provider themselves. DRACCOON is certified as a professional solution by ULD, the Independent National Centre for Data Protection, and EuroPriSe. As software produced in Germany, the filesharing solution is subject to strict German data protection laws and offers maximum data security for companies of all sizes and industries. DRACCOON is now working closely with ConSol to make the integration of the data exchange platform even faster and more efficient for customers.

The Munich-based company's portfolio ranges from technical and business consulting through software development and IT transformation to IT service & application management. It also has special know-how, including in open source monitoring and web technologies. In addition, the company develops and sells ConSol CM, a low-code platform for the individual implementation of processes and requirements in software. It ensures rapid implementation of innovations for technical and internal processes. The open source solution "Citrus", on the other hand, fully automatically tests the integration and interface conformity to other applications and thus ensures the stability of the overall system.

Marc Schieder, CIO of DRACCOON, welcomes the cooperation with ConSol: "Thanks to an individual software development by ConSol we are succeeding in making the API of DRACCOON even more effective in the connection. ConSol will support us in the future as a reliable partner in the field of test automation. This enables us to sustainably shorten the project duration up to the integration at the customer's site."

DRACCOON

Bernd Wiserner, Managing Director of ConSol, adds: “We are delighted that in DRACCOON we have found a partner whose portfolio perfectly complements our offering. Together we will succeed in automating a wide variety of processes and workflows from which our customers will benefit.”

About ConSol

ConSol Consulting & Solutions Software GmbH is a Munich-based IT full-service provider. Founded in 1984, the IT service provider specializes in complex IT systems and offers consulting, development, integration, monitoring and testing as well as operation and maintenance. For digital transformation, the company also develops and sells ConSol CM, a low-code platform that combines comprehensive BPM, CRM and case management functions.

ConSol's customers include major companies such as AOK Bayern, Daimler, Fraport, FWU, Kyocera, Schufa, Telefónica and UniCredit, as well as medium-sized companies such as M-net, maxdome, Haribo and Carglass. Public institutions such as the Federal Republic of Germany – Finance Agency or the city administrations of Munich and Potsdam also rely on solutions from ConSol. ConSol currently employs around 280 people worldwide. The company is headquartered in Munich and has branches in Düsseldorf and Nuremberg as well as subsidiaries in Austria, Poland, the USA and Dubai. Sales of the entire ConSol Group amounted to 25 million Euro in fiscal year 2016/2017. For more information, visit www.consol.de
