Press Report

Now GDPR-compliant: Messenger and Filesharing Dracocon and Teamwire offer GDPR-compliant messenger and filesharing for highest security standards

Regensburg (SM). For enterprises and agencies, a quick, but especially safe communication is of great importance. While the messenger-service “WhatsApp” has often been criticised especially in the business sector, the German messenger-service Teamwire has established itself as a secure and reliable alternative in the meanwhile. The secure messenger for companies and agencies improves the communication within a team and increases productivity in the messaging-era.

In a group or 1-on-1 not only messages, but also digital contents such as photos, videos, voice messages, locations, surveys and much more can be sent in real-time. The professional administration of the fully encrypted messenger ensures comprehensive security guidelines for all terminal devices and roll-outs. As a German company Teamwire complies with all European and German data protection laws and is GDPR-compliant. Especially companies and agencies with high data protection and security standards use this messenger.

Recently, the messenger for enterprises and agencies started offering unique alarm- and crisis-communication functions. With these functions critical events are immediately communicated with a special alarm tone and visually highlighted in Teamwire. Via the API from Teamwire the alarm-functions can also be automatically triggered by other systems (e.g. IT, alarm systems, IoT-functions, machines, production plants, etc.) and sent to different persons and groups.

DRACCOON on the other hand has a secure data storage, with which information in encrypted data rooms can be comfortably and securely exchanged via up- and download release links within teams and also with external partners. Compared to popular US-providers, the repeatedly certified solution “Made in Germany” is subjected to the strict German data protection laws and is also GDPR-compliant. Numerous enterprises value the maximum of data security that the German software enterprise offers with its solution.

Through the cooperation with Teamwire all necessary data will safely be stored in the cloud storage from DRACCOON in the future, in order to prevent new data silos from arising by storing information multiple times and in different locations. From there the data can be comfortably shared.

“We would like to offer a convenient solution.”, says Arved Graf von Stackelberg, Managing Director, CSO of DRACCOON, about the cooperation.
