Press Report

Dracoon and MobileIron cooperate Secure Filesharing for MobileIron-clients

From now on, clients of the Unified Endpoint Management provider will profit from the Enterprise Filesharing Solution Dracoon and therefore be able to safely and GDPR-compliantly exchange data locally and in the cloud.

Both the on-premise version as well as the modern cloud storage of the Enterprise Filesharing solution Dracoon can be used via AppConfig, the MDM-standard co-initiated by MobileIron, can be selected and used. The GDPR-compliant data exchange solution provides multiple features for editing and sharing data while keeping in mind highest security. Thanks to client-side encryption Dracoon-clients can profit from a high encryption standard. Nobody except the authorised user has access to company data, not even the provider himself.

“Already, many of our customers are successfully using MDM or UEM systems from MobileIron. With the support of AppConfig we now also offer the possibility to deliver our Apps pre-provisioned to the users and so the customer can remove them remotely in case of loss of a device”, comments Marc Schieder, CIO at DRACCOON, on the cooperation.
