cnetz is using the secure cloud by DRACOON

#cnetz e.V: after repeated cyber-attacks against politicians of the Bundestag, sending a signal and choosing a secure cloud for work

Secure platform for the cooperation between #cnetz and the parliament representatives

3rd May 2019

#cnetz e.V., a digital policy „think tank“ located in Berlin and the DRACOON GmbH from Regensburg, provider of a secure, German cloud-solution, have agreed on cooperating. The board of the association of #cnetz and the management of the young IT-company DRACOON agreed that #cnetz will provide its members with Dracoons' solution from now on.

“After repeated cyber-attacks against politicians of the Bundestag, we wanted to send a signal and choose a secure cloud for our work. DRACOON is a good example that innovative IT-security solutions are also being developed in Germany”, says René Pickard, deputy board spokesman of #cnetz.

“We are pleased about the cooperation with #cnetz, because with our solution we provide a secure platform that sets an example in the cooperation between #cnetz and the elected representatives in the parliaments” rejoices Arved Graf von Stackelberg, one of the two managing directors of the Dracocon GmbH.
